Index to volume 26 (1986)

Articles (titles in italics refer to Research and technical notes)

January (pp 1–56)

Behaviour of thick film resistors (Philips type RC–01) as low temperature thermometers in magnetic fields up to 5 T
W.A. Bosch, F. Mathu, H.C. Meijer and R.W. Willekers 3–8
Effect of heat link capacity on the energy pulse response of bolometers
G. Gallinaro, C. Salvo and S. Terreni 9–11
D.c. breakdown voltage characteristics in supercritical helium: breakdown in non-uniform fields
S. Nakayama and D.Ito 12–18
Strength and fracture toughness of Ti–5Al–2.5Sn ELI alloy at cryogenic temperatures
K. Nagai, K. Ishikawa, T. Mizoguchi and Y. Ito 19–23
Efficiencies of trays in cryogenic distillation columns
M.W. Biddulph 24–28
Application of low temperature desorption in systems for adsorptive purification of cryogenic gases
E.I. Leyarovski, J.K. Georgiev and A.L. Zahariev 29–32
Calculation of phase equilibria in nitrogen–ethane mixtures by extended corresponding states
K.D. Romig, Jr and H.J.M. Hanley 33–38
Increase of coupling-current losses in superconducting cables due to first-stage cabling
F. Sumiyoshi, H. Nagaishi, O. Ichimaru and K. Yamafuji 39–44
Semiconductor liquid helium level sensor
J. Cosier 45–46
Cooling of helium by vapour removal
A. Mironer 46–47
Safe method for warming up large cryostats
F. Guillon 47–48

February (pp 57–128)

Helium transfer for the Space Station era
W.F. Brooks 61–67
Concepts for on-orbit replenishment of liquid helium for SIRTF
A.J. Mord, A.R. Urbach, M.E. Poyer, L.C. Andreozzi, H.A. Snyder, L.A. Hermanson, W.R. Blalock and T.K. Kelly 68–72
Cryogen requirements for on-orbit cool-down and replenishment of SIRTF
D. Frank 73–77
Orbital replenishment of He II for SIRTF
T.C. Nast, D. Frank, C.K. Liu and R.T. Parmley 78–83
Superfluid helium transfer flight demonstration using the thermomechanical effect
M. DiPirro and S. Castles 84–89
Liquid helium transfer with a two-phase jet pump
D.G. Elliott 90–92
Fountain effect pump phenomena for liquid helium transfer: thermodynamic system studies
T.H.K. Frederking, S.W.K. Yuan and R.M. Carandang 93–96
Centrifugal pump for superfluid helium
W.G. Steward 97–102
Comparison of centrifugal and fountain effect pumps
V. Arp 103–106
Modelling of superfluid helium transfer
L.A. Hermanson, A.J. Mord and H.A. Snyder 107–110
Studies of heat transport to forced flow He II
L. Dresner, A. Kashani and S.W. Van Sciver 111–113
Superfluid flow in porous stainless steel
G.R. Karr and J.B. Hendricks 114–116
Preliminary results for a vortex induced, liquid handling and accountability procedure at zero gravity
T.T. Yeh, E.F. Moore, R.W. Davis and G.E. Mattingly 117–121
Preliminary flight performance of the infrared telescope on Spacelab 2
E.W. Urban and D.R. Ladner 122–128

March (pp 129–200)

Acoustic emission monitoring results from a Fermi dipole
O.O. Ige, A.D. McInturff and Y. Iwasa 131–140
Characteristics of low temperature deformation of composite conductors
I.N. Nechiporenko 141–151
Size and proximity effects in multifilamentary superconducting wires
D.P. Lazar, N.M. Vladimirova, V.M. Drobin, E.I. Dyachkov and I.S. Khukhareva 152–156
Current decay and temperatures during superconducting magnet coil quench
V. Kadambi and B. Dorri 157–164
Thermal model for a hybrid cryostat
J.L. Casse and E.E.M. Woestenburg 165–170
Thermodynamic analysis of a magnetic refrigerator with static heat switches
Y. Hakuraku and H. Ogata 171–176
Gifford–McMahon cycle – a theoretical analysis
M. Thirumaleshwar and S.V. Subramanyam 177–188
Heat balance analysis of single stage Gifford–McMahon cycle refrigerator
M. Thirumaleshwar and S.V. Subramanyam 189–195

April (pp 201–264)

Automatic and continuous system for measurement of superconductive transition temperatures using a dynamic technique
Q. Yausong and S. Yuee 203–206
Properties of some germanium resistance thermometers of Chinese manufacture
L.M. Besley 207–210
Carbon resistance thermometers and variable-range hopping
N.S. Sullivan and C.M. Edwards 211–214
Study and development of a solid cryogen cooler
B.F. Zhang 215–216
Thermal conductance of pressed brass contacts at liquid helium temperatures
L.J. Salerno, P. Kittel, W.F. Brooks, A.L. Spivak and W.G. Marks, Jr 217–221
Heat transfer in He I for industrially manufactured aluminium plate heat exchangers
B. Jager, G. Bon Mardion, G. Claudet and M. Desmaris 222–225
Cryogenic liquids forced boiling heat transfer in a rotating channel
B.S. Petukhov, V.M. Zhukov and S.B. Anisimov 226–233
Effects of tin-diffusion barriers on hysteresis loss and coupling current loss in bronze-processed Nb_3Sn multifilamentary composites
K. Miyahara, F. Sumiyoshi, K. Funaki, M. Iwakuma, Y. Kubota, T. Ogasawara and K. Yamafuji 234–241
Optimization of nuclear demagnetization process
I.A. Gachechiladze, D.V. Pavlov and A.V. Pantsulaya 242–247
Energy analysis of a Gifford–McMahon cycle cryorefrigerator
M. Thirumaleshwar and S.V. Subramanyam 248–251
Noise in relaxation oscillation d.c. SQUID
S.S. Tinchev and V.N. Sosnizkij 252–253
Simple inexpensive insert for cryogenic measurements in a storage vessel
L. Narici 254–256

May (pp 265–328)

Acoustic emission from superconducting magnets: the difference between layer wound coils and pancake wound coils
T. Ishikawa, S. Miura and Y. Nakagawa 267–272
Measurement of magnetization curves and losses in superconducting magnets at pulse durations of ≈ 1s
F. Gömöry 273–280
Experimental investigation of a.c. losses in cabled superconductors
T.M. Mower and Y. Iwasa 281–292
Study of the processes of insulation vacuum failure in helium cryostats
V.D. Bartenev, V.I. Datskov, Yu.A. Shishov and A.G. Zel'dovich 293–296
Detector for trace amounts of nitrogen in helium
R.J. Walker 297–299

Transient heat transfer to a forced flow of supercritical helium at 4.2 K
W.B. Bloem 300–308
Heat transfer during flow boiling of cryogenic fluids in vertical and horizontal tubes
D. Steiner 309–318
Platinum black powder as a heat exchanger material at low temperatures
P.R. Roach, Y. Takano, R.O. Hilleke, M.L. Vrtis, D. Jin and B.K. Sarma 319–321
Cryogenic low acoustic loss bonding of niobium with application to gravitational radiation detectors
D.G. Blair and D.K. Ramm 322–324

June (pp 329–384)

Pulse tube refrigerator – an alternative cryocooler?
R.N. Richardson 331–340
Versatile experimental low power 4 K cryocooler
N. Lambert, S. Barbanera and J.E. Zimmerman 341–345
Enhancement of superconductivity in Pb–Sb system alloy filament produced by glass-coated melt spinning
T. Gotō 346–351
Stability limit field in superconductors. Part 1 single core
T. Akachi, R. Gomez and T. Ogasawara 352–357
Stability limit field in superconductors. Part 2 multifilamentary composites
T. Akachi, T. Ogasawara, R. Gomez and C. Wang 358–364
Time-dependent deformation of austenitic stainless steels at cryogenic temperatures
T. Ogata and K. Ishikawa 365–369
Quality factor of niobium acoustic resonators below 1 K
D.G. Blair, M. Kopp, P. Lynam and D.K. Ramm 370–372
Heat transport in self-pumping multilayer insulation
T.L. Hałaczek and J. Rafałowicz 373–376
T–S diagram for helium that extends below the lambda line
J.G. Weisend, J.M. Pfotenhauer and S.W. Van Sciver 377–378
Impregnation of superconducting solenoid with cryocon grease
S.C. Bapna and M. Thirumaleshwar 378–379

July (pp 385–440)

Miniature Stirling cryocoolers: trends in development
G. Walker 387–391
Strength–toughness relationship for austenitic stainless steel welds at 4 K
R.L. Tobler, T.A. Siewert and H.I. McHenry 392–395
Fatigue crack initiation from notches in austenitic stainless steels
R.L. Tobler and Q.S. Shu
Thermal expansion and heat capacity of some stainless steels and FeNi alloys
S.J. Collocott and G.K. White 402–405
Long sample high sensitivity critical current measurements under strain
C.R. Walters, I.M. Davidson and G.E. Tuck 406–412
Russian germanium resistance thermometers at low temperatures in magnetic fields
L.M. Besley, G.Q. Zhang, E.C. Horrigan and A. Szmyrka-Grzebyk 413–416
Mechanical properties of polymer matrix composites at 77 K and at room temperature after irradiation with ^{60}Co γ rays
S. Egusa and M. Hagiwara 417–422
Stability research of externally pressurized gas bearings for the cryogenic expansion turbine
Chen Chun-Zheng and Xia Xiang-Zu 423–426
Kapitza conductance of crystals cleaved under He II
P.W. Eckels, J.H. Parker, Jr and A. Patterson 427–430
Method for extracting neon and helium from air
E.I. Leyarovski, J.K. Georgiev and B.V. Nicolov 431–434
Cryogenic piezoelectric displacement tester
B. Yurke, P.G. Kaminsky and D.M. Eigler 435–436

August/September (pp 441–520)

Design of the cryogenic system for the TORE SUPRA tokamak
G. Claudet, G. Bon Mardion, B. Jager and G. Gistau 443–449
Improving adsorption cryocoolers by multi-stage compression and reducing void volume
S. Bard 450–458
Thermal contraction and cracking of extruded polyethylene electrical insulation at cryogenic temperatures
N. Shimizu, T. Nagata, K. Horii, K. Fukushima, M. Nagao and M. Kosaki 459–466
Thick film chip resistors for use as low temperature thermometers
Q. Li, C.H. Watson, R.G. Goodrich, D.G. Haase and H. Lukefahr 467–470
Continuously cooled coldplates: revisited
J. van der Maas, P.A. Probst, R. Stubi and C. Rizzuto 471–474
Joule–Thomson effect in liquid He II
B.J. Huang 475–477
Hysteresis losses in fine filament internal-tin superconductors
R.B. Goldfarb and J.W. Ekin 478–481
Quench circuit for electronic instruments used with superconducting magnets
R.G. Benson, R.B. Goldfarb and E.S. Pittman 482–483
Automatic control of helium gas purity in a recovery system
I.M. Templeton 484
Resistance thermometer of rhodium–ferrum microwire
S.P. Logvinenko and G.F. Mikhina 484–485
Liquid helium cooled trap of a coaxial type for a ^3He–^4He dilution refrigerator
A. Sawada, S. Inoue and Y. Masuda 486–487

October (pp 521–576)

Superconducting magnet design for open gradient magnetic separation
J. Gerhold 523–530
Visualization of resistive states of superconducting films
V.A. Konovodchenko, A.G. Sivakov, A.P. Zhuravel, V.G. Efremenko and B.B. Banduryan 531–535
Thin-film platinum resistance thermometer for use at low temperatures and in high magnetic fields
T. Haruyama and R. Yoshizaki 536–538
Heat transfer and hydrodynamics of channelled cryogenic liquids in fields of centrifugal forces
Yu.A. Kirichenko, R.I. Fedorov and V.V. Tsybulsky 539–543
Temperature variation of thermal conductivity of self-pumping multilayer insulation
T.L. Hałaczek and J. Rafałowicz 544–546
Two stage Gifford–McMahon cycle cryorefrigerator operating at 20 K
M. Thirumaleshwar and S.V. Subramanyam 547–555
Critical current and Ginsburg–Landau parameters for whiskers from the In–Pb system
T. Werner and R. Tidecks 556–559
Development of disk fin type compact current leads
K. Ishibashi, E. Murakami, K. Maehata, A. Katase and M. Wake 560–565
Modified boil-off method for measuring a.c. losses of superconducting composites
K. Kuroda 566–568

November (pp 577–640)

Subcooled superfluid helium cryostat for a hybrid magnet system
M.J. Leupold and Y. Iwasa 579–585
Methods to lower the energy expenditures on rotor cryostatting in superconducting turbine generators
Ya. B. Danilevich, A.G. Korolkov and M.O. Lutset 586–598
Performance summary of the Brookhaven superconducting power transmission system
E.B. Forsyth and R.A. Thomas 599–614
Nb_3Al superconducting tape prepared by CO_2 laser beam irradiation
Y. Yamada, S. Murase, M. Sasaki, E. Nakamura, H. Kumakura, K. Togano and K. Tachikawa 615–620
Internal fields in magnetic materials and superconductors
R.B. Goldfarb 621–622
Digital feedback loops for d.c. SQUIDs
D. Drung 623–627
Effect of plastic deformation of the thermal conductivity of bismuth–thallium and bismuth–lead systems between 1.5 and 300 K
C.K. Subramaniam and K.D. Chaudhuri 628–633
Experimental study of the influence of transient performance in pressure

pulse tubes on isentropic efficiency of rotary jet expanders
Shao Jian, Gao Jingling, Feng Yangpu, Shen Yongnian and Zhang Chaohan 634–636

December (pp 641–704)

Critical current distributions in superconducting composites
W.H. Warnes and D.C. Larbalestier 643
Development of a Nb_3Sn multifilamentary composite conductor for a.c. use
Y. Kubota, H. Okon and T. Ogasawara 654
Is Nb_3Si a 25 K superconductor?
D. Dew-Hughes 660
Simple method to realize the zero-field transition temperature of a superconductive fixed point
D. Hechtfischer 665
Elimination of flux-transducer crosstalk in multichannel SQUID magnetometers
H.J.M. ter Brake, F.H. Fleuren, J.A. Ulfman and J. Flokstra 667
Heat flux from 277 to 77 K through a few layers of multilayer insulation
Q.S. Shu, R.W. Fast and H.L. Hart 671
Simple numerical modelling technique for cryostat design
A.D. Caplin and A.T. Cayless 678
Boiling phenomena in pressurized He II confined to a channel
S.R. Breon and S.W. Van Sciver 682
Controversial helium drops
J.M. Goldschvartz 692
Thermometer for between 0.01 and 4 K using a carbon resistor
F. Lerbet and G. Bellessa 694

Conference reports

Cryogenic engineering conference/ international cryogenic materials conference, Boston, MA, USA, 12–16 August 1985 49–51
11th International cryogenic engineering conference (ICEC 11), Berlin-West, Germany, 22–25 April 1986 489–491
First meeting of the VAMAS Technical Working Party on Superconductors and Cryogenic Structural Materials, Karlsruhe, FRG, 28–29 April 1986 488–489
Helium transfer in space workshop, Boulder, CO, USA, 20–21 August 1985 59–60
Institute of Physics low temperature conference, London, UK, 13 May 1986 569
International conference on production and purification of coal gas and separation of air, Beijing, China, 7–10 October 1985 51–52
22nd Annual meeting of the Society for Cryobiology, Madison, WI, USA, 18–21 June 1985 196

Book reviews

Applied Superconductivity: Metallurgy and Physics of Titanium Alloys. Volume 1: Fundamentals, E.W. Collings 492–493
Applied Superconductivity: Metallurgy and Physics of Titanium Alloys. Volume 2: Applications, E.W. Collings 570
Cryogenic Systems: Monographs on Cryogenics. Volume 3 (2nd Edn), R.F. Barron 571
Tieffetemperaturtechnik, H. Hausen and H. Linde 493

Exhibition previews

(Section in special conference issues devoted to exhibitors)

11th International cryogenic engineering conference, Berlin-West, Germany, 22–25 April 1986 259–262
1986 Applied superconductivity conference, Baltimore, USA, 29 September–3 October 1986 510–519
